

## **The simplest way to use it:**

Open the example scene PPS\_Example and find the PPS\_Example script. The script contains detailed usage comments. You just need to prepare your List<Vector3> and pass it to ParticlePathSystem's InitializePath.

### **Note:**

Since the particles involve many parameters related to randomness and different initial speeds and states, it is recommended to directly modify our prefab. If you already have your own effects, please copy the particle system's module for assignment.
